

Water Source Heat Pump

Split System

Nominal cooling capacity range: 2 to 16 kW

Nominal heating capacity range: 2 to 17 kW

HFC 410A
ecological refrigerant

- High comfort levels
- Maximum diversity and flexibility
- Quietest operation
- High efficiency, EER>4
- Reliability

Your climate. We're there

Water Source Heat Pump

WSHP System

This decentralized, year-round heating and cooling system consists of a two-pipe closed loop water circuit, through which non-refrigerated water circulates continuously throughout the building. Filled with water, this circuit provides both a “sink” and “source” of energy. On demand for heating a space, the conditioner will absorb heat from the loop circuit, whereas on demand for cooling a space, the conditioner will reject heat to the loop circuit. In such a way these systems balance the heating and cooling requirements, specific and seasonal, of the entire building recovering and better utilising otherwise-wasted energy.

McQuay WSHP Split System

The New WSHP SPLIT by McQuay combines the benefits of such technology with the innovation and customisability of Split systems.

The motor-condensing section, extremely silent and compact, can find its location within corridors false ceilings, service rooms, closets while the room to be conditioned can be equipped with the unit better fulfilling the Customer needs:

- ducted ceiling concealed
- cassette
- wall mount
- ceiling/floor convertible

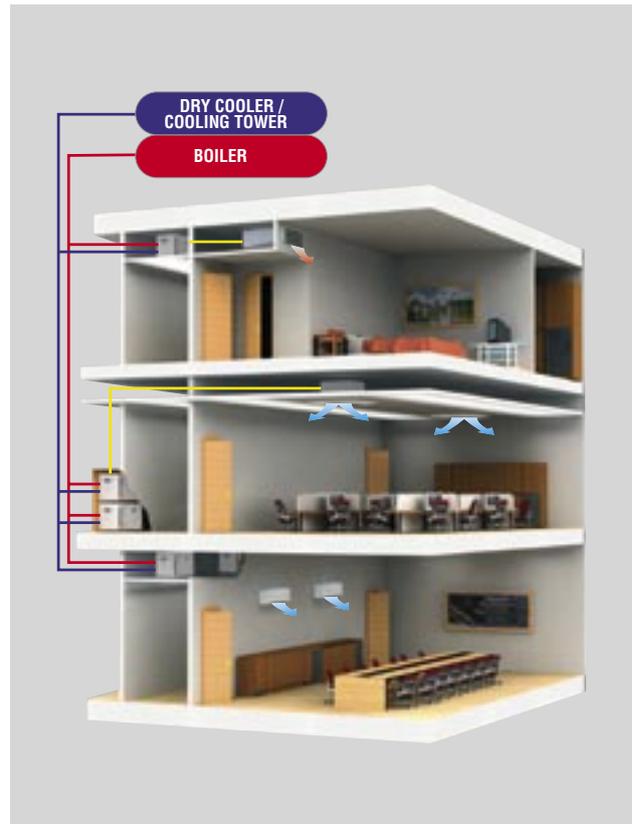

All solutions offering the most advanced features in terms of air quality, treatment and distribution, temperature and fan speed regulation and programming, controls.

Maximum flexibility

Ideal solution for conditioning hotels, offices, residential sites and commercial centres, WSHP SPLIT systems limit engineering and construction constrains. For every room it is possible to adopt a different configuration according to the building structure, space, sound requirements, end user preferences.

High efficiency

High performance compressors utilising refrigerant R410A, coaxial heat exchanger maximising the heat transfer with minimum pressure drop and an optimised refrigerant circuit, grant an extremely efficient operation both specific (EER > 4) and seasonal.

NIM PC

SMART MANAGER

Quiet operation

Comfort and well being is maximised by placing the compressor outside of the conditioned room minimising sound emissions.

Group control

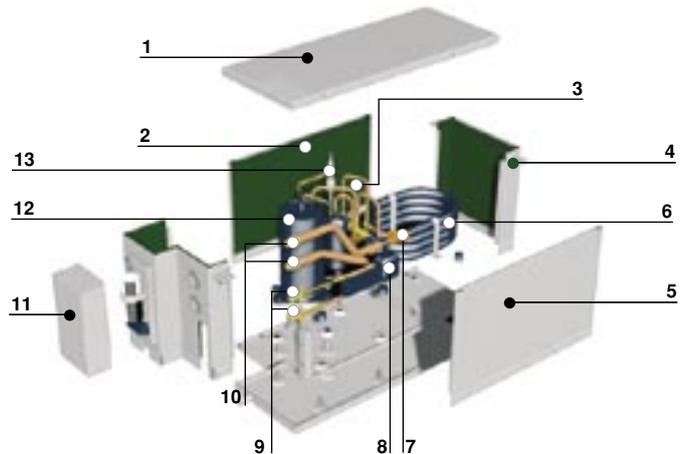

Up to 256 WSHP units can be monitored and controlled centrally using Smart Manager [central controller] or NIM PC [A/C management system].

Water Source Heat Pump

WSHP System

1. Durable painted galvanised steel
2. Sound-proof insulation
3. 4-way valve
4. Hanger bracket
5. Removable access panel for easy servicing & maintenance
6. Coaxial (Tube-in-tube) heat exchanger
7. Insulated capillary tube
8. Water temperature sensor
9. Flare valves for Gas pipe connection
10. Brass adaptor for Water pipe connection
11. Control box
12. High performance compressor with double anti-vibration mounts
13. High pressure switch

- Sleep Mode, automatically adjusts the temperature to optimise unit operation
This mode also acts as energy saving operation
- Auto Swing, with automatic horizontal movement of the louvers
- Ventilation with three selectable fan speeds and automatic setting of airflow
- Cold draft prevention
- 2 compressor protection settings
- Return air differential setting based on application

SUPERIOR INDOOR AIR QUALITY

Three-stage active filter (standard) which removes dust and particles with diameters down to 0.01 micron. Its ionised section prevents potential bacteria proliferation and minimises unpleasant smells. Ioniser (standard): negative ions generation when ambient air lost freshness. NTP Air Sterilizer (optional): an integrated system which neutralises un-pleasant smells

CONTROLS

IR control handset and led display G11 (standard), wired handset SLM + AC5300 (optional) or Netware 2.

Functions: cooling, heating, auto-changeover, dehumidification, fan only, sleep (Energy Saving)

Features: • 1 day timer (SLM) • 7 day timer (Netware 2) • Self diagnostics • Auto-restart after power failure based on last temperature and mode setting • Memory re-call of two personalised settings

- Four way air discharge - air swing • Manual and Automatic Fan Speed control
- Two sides pre-set for ducting • Fresh air connection for volumes up to 20% of nominal unit air flow
- In-built condensate lift pump (750 mm) • Saran Net washable filter
- Three-stage Active filter which removes dust and particles with diameters down to 0.01 micron. Its ionised section prevents potential bacteria proliferation and minimises unpleasant smells
- Sleep Mode, automatically adjusts the temperature to optimise unit operation
- Cold draft prevention • 2 compressor protection settings • Return air differential setting based on application

CONTROLS

IR control handset and led display G7 (standard), wired handset SLM + AC5300 (optional) or Netware 2. Functions: cooling, heating, auto-changeover, dehumidification, fan only, sleep (Energy Saving) Features: • 1 day timer (SLM) • 7 day timer (Netware 2) • Self diagnostics • Auto-restart after power failure based on last temperature and mode setting
